

CHINEDU OKOTU

Software Engineer · Backend & Full-Stack Development · Remote
chineokotu@gmail.com | github.com/chineduokotu | Nigeria (Available Globally · Remote)

PROFESSIONAL SUMMARY

Results-driven Software Engineer with hands-on experience building full-stack web applications, RESTful APIs, and production-ready backend systems. Proficient in Python, JavaScript/Node.js, and React, with a strong track record of integrating third-party APIs, structuring scalable architectures, and shipping real projects for real clients. Comfortable working independently in remote, Linux-based, and containerized environments. Actively exploring AI infrastructure and developer tooling, including MCP server development and sandbox orchestration.

TECHNICAL SKILLS

Languages: Python, JavaScript (ES6+), HTML5, CSS3	Backend: Node.js, Express.js, REST API Design	Frontend: React, Responsive UI, Component Architecture
Databases: MongoDB, Mongoose ODM	DevOps & Tools: Docker (basic), Git, GitHub, Linux CLI	Specialties: API Integration, System Design, Debugging

PROFESSIONAL EXPERIENCE

Freelance Full-Stack Developer | Self-Employed / Contract

2022 – Present

- Designed, built, and deployed full-stack web applications end-to-end for clients, covering requirements gathering through production deployment.
- Architected RESTful backend services using Node.js and Express.js, connected to MongoDB with Mongoose ODM, ensuring clean data modelling and efficient querying.
- Developed responsive, component-driven frontends in React; enforced mobile-first design across all client-facing deliverables.
- Integrated multiple third-party APIs (payment, data, translation, streaming) into production applications, handling authentication, error recovery, and rate limits.
- Managed source control workflows in Git/GitHub; maintained clean commit history and collaborated effectively on open-source and client repositories.
- Configured and maintained Linux-based local and cloud development environments, including scripting automation tasks via the CLI.

NOTABLE PROJECTS

Service Booking Platform

React · Node.js · Express.js · MongoDB

End-to-end service marketplace allowing users to list, discover, and book services. Implemented JWT authentication, booking state management, and a REST API with full CRUD operations. Deployed on a cloud VPS with environment-variable-driven configuration.

Real-Time Movie Search Engine

JavaScript · External REST API · Async/Await

Dynamic search interface consuming a third-party movie database API. Engineered debounced search, lazy image loading, and structured error handling for graceful API failure modes.

Language Translator Web App

Node.js · Translation API · React

Instant translation tool integrated with a cloud NLP API. Handled multi-language routing, character-limit enforcement, and token management on the backend proxy layer.

Crypto Market Dashboard

React · WebSocket/API · Data Visualisation

Real-time cryptocurrency tracking dashboard with live price feeds, percentage change indicators, and persistent watchlist via local storage. Designed for extensibility toward alerting and portfolio features.

RELEVANT STRENGTHS FOR AI & INFRASTRUCTURE ROLES

API & Backend Systems Experience:

Deep production exposure to designing and consuming APIs, handling async workflows, and debugging complex integration failures — directly applicable to MCP server and sandbox tooling development.

Linux & CLI Fluency:

Daily use of Linux command-line tools, shell scripting, and process management; comfortable navigating containerised and remote environments without GUI support.

Debugging & Root-Cause Analysis:

Systematic approach to diagnosing production issues across the full stack, from network-level API errors to runtime exceptions and data inconsistencies.

Rapid Framework Adoption:

Proven ability to learn new frameworks, SDKs, and toolchains quickly; consistently shipped production-quality code in languages and environments adopted mid-project.

AI Systems Interest:

Actively studying AI infrastructure, LLM tooling patterns, and backend orchestration for intelligent systems; building side projects at the AI/backend intersection.

EDUCATION

B.Sc. Computer Science

Graduated

ADDITIONAL INFORMATION

- Remote-first professional; experienced with asynchronous communication and independent project delivery across time zones.
- Strong interest in AI systems, developer tooling, and backend infrastructure for intelligent applications.
- Continuously shipping real-world projects to maintain current, production-level engineering skills.
